Feline Spinal Muscular Atrophy (SMA) - PCR

Result: Genotype N/N

Interpretation: The analyzed cat is a noncarrier of the mutation, that is suggested to cause Spinal Muscular Atrophy (SMA).

Since it cannot pass the mutation onto its offspring it can be mated to any other cat.

The currently known mutation has been analysed.

This result is only valid for the submitted sample material and for the breed Maine Coon.

The current result is only valid for the sample submitted to our laboratory. The sender is responsible for the correct information regarding the sample material. The laboratory can not be made liable. Furthermore, any obligation for compensation is limited to the value of the tests performed.

There is a possibility that other mutations may have caused the disease/phenotype. The analysis was performed according to the latest
